ProjectWise®
CONNECT Edition

Accelerate Your *Going Digital* Strategy

ProjectWise CONNECT Edition will help your team deliver better results by increasing your productivity, saving on your overall IT costs, and advancing your digital project delivery strategy.

Bentley®
Advancing Infrastructure

Increase Productivity

CHALLENGE

Your design team is at the heart of your project delivery practice but now, it needs to efficiently collaborate with participants outside the design workflow.

SOLUTION

New, Integrated Tools and Services

Deliverables Management

Integrate your supply chain and automate the transmittal packaging and review process—all while maintaining a full audit trail.
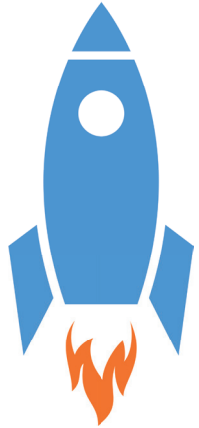

Office 365 Integration

Integrate your design workflows and data with the wider ecosystem of project participants and software applications.

PDF Review and Markup

Allow your supply chain to share, comment on, and redline the latest design drawings, with a standard web browser. It captures all review information to eliminate version uncertainty and increase the speed of design reviews.

Case Study 1:
Save Valuable Time

- Many firms still use email, spreadsheets, and expensive, siloed solutions to manage contractual deliverables.

- One of our clients used to spend an average of 90-minutes to assemble a single transmittal package.

- After switching to ProjectWise CONNECT Edition, the client is now using Deliverables Management to save an entire hour on each transmittal— saving hundreds of hours on every new project!

Save Overall IT Costs

CHALLENGE

Your project delivery practice needs a robust technology infrastructure. But, if you're not careful, the cost can be a drag on your bottom line.

SOLUTION

Eliminate the cost of redundant 3rd-party software

The new ProjectWise 365 Services, which come with CONNECT Edition, can help you:

- Reduce costs by replacing redundant, 3rd-party software licenses
- Save time by reducing the number of vendors to manage
- Increase productivity with integrated digital workflows

Reduce on-premises IT infrastructure costs

Move your ProjectWise implementation to a secure and reliable Microsoft Azure cloud environment. This will allow you to:

- Reduce server hardware and network management expenses
- Reduce disaster recovery costs and avoid extended work interruptions
- Eliminate the expense of administrating on-premises ProjectWise servers

### Eliminate server license fees And pay only for what you use

To help your business be more agile, CONNECT Edition introduces consumption-based licensing to match your changing workload. With the new model, you can:

- Scale your ProjectWise users up-or-down and only pay for what you use
- Increase productivity further by deploying new ProjectWise servers with no additional licensing costs

Case Study 2: Reduce IT Costs

- One of our users used to spend more than half-a-million-dollars per year for a cloud-based file sharing service. Then, they realized they could replace it with ProjectWise Share—and achieve significant IT cost savings.

- Another of our users realized that they could reduce the spend for their ProjectWise infrastructure by up to 52 percent by moving it to the cloud. They also identified an additional $200,000 in savings when they learned that ProjectWise cloud-hosting includes built-in Azure disaster recovery services.

Advance Your Digital Project Delivery Strategy

CHALLENGE

Infrastructure projects are getting more complicated, and there's a growing number of suppliers and external stakeholders that design teams need to collaborate with—while remaining agile and responsive.

SOLUTION

Accelerate Collaboration with Clients and Stakeholders

Allow all project participants to connect with frictionless information exchange and digital workflows.

Deliver Projects Faster with Business Process Automation

Leverage the new ProjectWise 365 Services and other capabilities, such as Office 365 integration and PDF Review and Markup.

### Enable Greater Assurance in a Connected Data Environment

Provide your teams with one, verifiable source of truth.

Case Study 3: Advance Digital Project Delivery

One of our users wanted to push the boundaries of their digital project delivery on a major public works project. With a focus on improving digital collaboration, they used ProjectWise CONNECT Edition to coordinate with 12 participating design disciplines, as well as many supply chain companies and stakeholders. The results were impressive.

- Eliminated a total of six months from their design program
- Achieved a 32 percent reduction in design production time
- Reduced project information delivery time to the client by 80 percent—from five days down to just one —by using digital approvals and instant transmittals
