Falling oil prices are focusing attention on asset life extension through effective asset integrity management during this critical phase in the oil and gas industry. A recent survey of Oil & Gas IQ members uncovers the processes being used and investments being made during this time of low profits.

**Field life extension**
- New production equipment
- More subsea tiebacks
- Changing meteorological data

**Core Business**
- Inspection and Compliance
- Novel Technology
- Engineering and Analysis

**Novel Technology and the Future**
- Are you using unmanned aerial vehicles (drones) for inspections?
- How much engineering analysis do you do in-house?
- Are you looking to integrate any of the following technologies for your structural integrity management programs?

**Inspection and Compliance**
- What techniques are you currently using to capture as-built information?

**Engineering and Analysis**
- Your overall engineering analysis do you do in-house?
