

Bentley Transmittal Services

Secure, Trusted Transmittal Processes for ProjectWise®

Bentley Transmittal Services provides a secure process tightly integrated with ProjectWise V8i (SELECTseries 4). This enables users to manage and lower the risk around contractual, legal, and financial compliance, while they track the entire lifecycle of the process. The software ensures trusted transmittal information, speeds the transmittal process, and makes it easy to identify and resolve urgent issues.

Confident Contractual Communications

Bentley Transmittal Services enables compliance with contractual obligations and provides proof that the right content is delivered to the right people, acknowledged, and acted on in a timely manner, minimizing errors and omissions. The software keeps track of all project deliverables in a single place and tracks what has been sent, to whom, and when, and then if and when it was acknowledged and a response was given.

Bentley Transmittal Services provides current and accurate version information to authorized contractors and subcontractors of the transmittal package, including status, due dates and actions needed to be taken to complete the transmittal process. The tight integration creates transmittal packages directly from ProjectWise, enabling quick access to information and ensuring the information is correct.

Trusted Transmittals

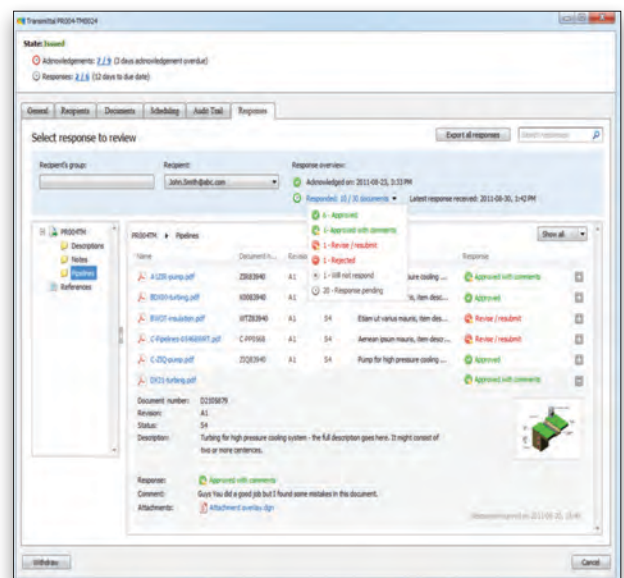

Transmittals are created directly from ProjectWise Explorer, and include all reference files, which helps to ensure transmittal quality. The Bentley Transmittal Services external facing web-based portal allows authorized transmittal recipients to securely and efficiently access and review package data, acknowledge it directly from the portal, download packages, and provide review comments.

Bentley Transmittal Services ensures security for transmittals as only authorized users can create, view, download and respond to a transmittal package. The product increases visibility to the transmittal project through direct access to information on project delivery and response status, which improves project managers' abilities to track issues and monitor progress.

Speedier Project Execution

Bentley Transmittal Services enables users to cut time wasted searching for critical project information. The product increases the efficiency of project teams by making it easy to pull together needed content and ensure complete information is transmitted. The transmittal dashboards provides status on outstanding issues and enables efficient processes for easily identifying and resolving urgent issues, thereby compressing project schedules.

The automation of the entire transmittal process increases visibility, and saves time by making it easy to identify and resolve urgent issues. In addition, Bentley Transmittal Services can help reduce transmittal processing and delays caused by the delivery of inaccurate information.

Easily identify and resolve urgent issues using the Bentley Transmittal Services dashboard.

System Requirements

Hardware Prerequisites:

- Processor: 2 GHz x64 dual-core processor minimum
- Memory 4: GB RAM minimum; 16 GB or more recommended
- Hard disk: 10 GB or more of free hard disk space

Operating System:

- Windows Server 2008 SP2
- Windows Server 2008 R2 SP1 Standard and Enterprise Editions (64-bit)

Software Prerequisites

- Internet Information Server (IIS)
- Microsoft .NET Framework 4
- Windows Identity Foundation
- Microsoft ADO.NET Entity Framework 4.1
- ASP.NET v4.0.30319
- ProjectWise Explorer V8i (SELECTseries 4)
Supported Databases:
- Microsoft SQL Server 2008 R2 SP1
- Microsoft SQL Server 2008 SP3, Standard / Enterprise Edition

Supported Browsers:

- Internet Explorer 8 or 9 (32-bit only)
