**Brand:** ProjectWise

**Product Line:** Project Delivery

**Services and Apps:** ProjectWise Design Integration, Deliverables Management, ProjectWise Project Performance Dashboards, ProjectWise Edge, ProjectWise WorkSite

**Availability:** General Access, Available Now

Oct. 31, 2016

## **Engineering and Construction Firms “Going Digital” to Improve Project Delivery with ProjectWise CONNECT Edition**

For architecture, engineering, and construction firms active in project delivery, as well as for owner-operators, it is increasingly important to digitally share engineering models, project information, and deliverables with the entire supply chain throughout design, construction, and completions. Firms that are *going digital* are significantly reducing project delivery time and are gaining better insight into project performance, ensuring collaboration among project participants, streamlining design processes, and improving data quality and governance.

ProjectWise CONNECT Edition provides a connected data environment, and enables firms *going digital* with managed access to project information and essential project services including deliverables management, issues resolution, BIM review, and field data management.

Mike Schellhase, senior director, software development, Bentley Systems, said, “Our users are *going digital*. They want to share project information with secure information mobility to connect their supply chain and give project stakeholders insight into project performance. Using our digital project delivery capabilities, our users are developing repeatable best practices, improving quality deliverables and winning more work.”

Firms active in project delivery are benefitting from ProjectWise’s digital project services through:

- **Virtualizing talent through global worksharing**  
Leveraging the best skillsets of in-house resources regardless of location and open access to new sources of talent from Value Engineering Centers leads to more cost-effective and better performing project execution models.
- **Connected supply chain for automated deliverable management**  
Users can now manage and lower the risks involved with schedule, contractual, and legal compliance with automated review workflows. Moreover, ProjectWise's digital project services helps users ensure their transmittal information is accurate and speeds submittals and RFIs by identifying and resolving issues quickly and ensuring quality of project deliverables.
- **Connected field data management for closed-loop workflows**  
Field data management cloud services enable users to accelerate field collaboration with access to multiple project repositories and comprehensive document control. Users can now configure forms and report templates to ensure all tests and inspections are performed to standards and ensure consistency, speed, and coordination across all field activities such as QA/QC, daily reports, and inspections using mobile and other devices.
- **Analytic driven project insights**  
Deliverables-based KPIs and the ability to aggregate analytics across enterprise data sources, including cost, schedule, and document controls, allow users to make strategic decisions based on project history and trends across a project, a program, or the enterprise.

ProjectWise *collaboration services* for digital project delivery uniquely support digital workflows that span design to construction through completions. Providing a connected data environment as a single source of information enables organizations to securely aggregate, manage, and share digital project data.

### **What ProjectWise CONNECT Edition Users Are Saying About Going Digital**

Dillon Consulting Limited implemented ProjectWise to enable worksharing among multiple offices and to exchange contractual deliverables with the extended supply chain. Dave Widdifield, system administrator, Dillon Consulting Limited, said, "With an expectation of several thousand transmittals, ProjectWise Deliverables Management eliminated a manual process and streamlines contract management with our supply chain."

Brent Mauti, global director, design technology, IBI Group, said, "Bentley empowered IBI Group to devise a true hybrid LAN-Cloud project collaboration solution, where we have already saved USD 30,000 in hardware, alone. Additionally, this connected environment provided us with increased productivity without having to manually conduct file transfers across offices, netting 400 hours saved!"

Rob Braun, director, Automation Systems Integration, CH2M, said, “The simplicity and ease of use of ProjectWise digital project services, such as Project Performance Dashboards, helps us monitor status of project documentation and deliverables resulting in a streamlined delivery process and improved satisfaction of our customers.”

### **About ProjectWise**

ProjectWise is a project collaboration and content management platform that helps organizations avoid risk and stay competitive by enabling going-digital strategies for project delivery. It provides comprehensive worksharing and content management required to increase transparency throughout the project lifecycle. With ProjectWise, organizations of all sizes have the ability to integrate data, people, and process to ensure successful project delivery. Deployed in 101 countries, ProjectWise is the system of choice for 25 of the ENR Top 25 Design Firms, 44 of the ENR Top 50 Design Firms, 81 of the ENR Top 100 Design Firms, 29 of the ENR Top 50 Design-Build Firms, 249 of the Bentley Infrastructure 500 Top Owners, and the majority of U.S. state departments of transportation.
