Brand: AssetWise

Service: Electronic Plan Review

Availability: General Access, Now Available

Oct. 31, 2016

Municipalities Improve the Quality and Speed of Their Plan Review Processes with Bentley's Electronic Plan Review

Bentley's new Electronic Plan Review is a hosted system that eliminates paper plans, reduces delivery time, and increases visibility into the plan review workflow. This Bentley managed service automates the electronic plan review process, from project application completed with an easy-to-use, public-facing website through efficient online review and approval by municipal department personnel. Electronic Plan Review provides municipalities and their constituents with continuous access and the ability to submit plans, check status, and review decisions regarding their projects and plans.

Key capabilities include:

- Streamlined plan review processes – provides municipalities with fast and easy access to accurate plan information. Reviewers can quickly and easily markup plans and share information with other reviewers and applicants, saving time and rework.
- Managed electronic plan workflows – agencies can manage the plan review and approval processes electronically for commercial building, residential building, and planning and land use reviews. Using the Electronic Plan Review reviewer website, municipalities can check and review plans concurrently instead of sequentially. By using standard workflow templates that match an organization's business processes, Electronic Plan Review saves printing and transportation costs and reduces plan review times from weeks to days.

- Easy-to-use applicant website – enables constituents to quickly and easily submit plans through the applicant website. Applicants can create and submit new projects, upload plans and documents, and monitor project review status online, which increases visibility and reduces plan approval times.

Noah Eckhouse, Bentley’s senior vice president, Portfolio Development, said, “At last, the electronic plan review process is made easy for both municipalities and their constituents. With this innovative cloud service from Bentley, constituents and governments save money in printing and transportation costs, and results in faster application processing.”

Electronic Plan Review enables people, plans, communication, schedules, and markups to interact in a consistent, clearly defined workflow. Using a public-facing website and proven Bentley software, Electronic Plan Review facilitates the communication, workflow, information, and document control needed to have full visibility into ongoing plan review activities.

About Electronic Plan Review

Electronic Plan Review provides municipalities and their constituents with continuous access and the ability to submit plans, check status and review decisions regarding their projects and plans. Electronic Plan Review gives municipalities and applicants the ease, speed, and confidence involved in submitting, reviewing, and concluding the plan review process.

About AssetWise CONNECT Edition

AssetWise CONNECT Edition optimizes asset performance and supports an asset strategy for risk mitigation, operational efficiency, and regulatory compliance. Built on a hybrid cloud-computing platform that leverages a connected data environment, AssetWise facilitates the interoperability of multiple data sources, providing operations, maintenance, and engineering with accurate and reliable information, when it is needed, to make informed decisions, from capital planning through proactive asset maintenance.
